4 Wireless sensor networks: An efficient key establishment scheme for secure

aggregating sensor networks

Erik-Oliver Blaß, Martina Zitterbart

March 2006 Proceedings of the 2006 ACM Symposium on Information, computer and communications security ASIACCS '06

**Publisher: ACM Press** 

Full text available: pdf(252.38 KB) Additional Information: full citation, abstract, references, index terms

Key establishment is a fundamental prerequisite for secure communication in wireless sensor networks. A new node joining the network needs to efficiently and autonomously set up secret keys with his communication partners without the use of a central infrastructure. Most cited current research papers focus on a probabilistic distribution of sets of keys from larger *key pools* to new nodes. This results in unnecessary expensive

communication and memory consumption, growing linearly with the ...

Gerberick
May 1990 ACM SIGSAC Review, Volume 8 Issue 2 Publisher: ACM Press Full text available: pdf(962.96 KB) Additional Information: full citation, abstract, index terms There are two main issues concerning data security on networks; controlling access and the vulnerability of data communication links. A brief introduction to the various techniques which may be applied to these concerns are given in this paper. 7 Commentators Mike Godwin, William A. Bayse, Marc Rotenberg, Lewis M. Branscomb, Anne M. Branscomb, Ronald L. Rivest, Andrew Grosso, Gary T. We show how to significantly speed-up the encryption portion of some public-key cryptosystems by the simple expedient of allowing a sender to maintain state that is reused across different encryptions. In particular we present stateful versions of the DHIES and Kurosawa-Desmedt schemes that each use only 1 exponentiation to encrypt, as opposed to 2 and 3 respectively in the original schemes, yielding the fastest discrete-log based public-key encryption schemes known in the random-oracle and stan ...

**Keywords**: cryptography, public-key encryption 10 Data protection: Attribute-based encryption for fine-grained access control of encrypted data Vipul Goyal, Omkant Pandey, Amit Sahai, Brent Waters October 2006 Proceedings of the 13th ACM conference on Computer and communications security CCS '06 Publisher: ACM Press Full text available: pdf(277.46 KB) Additional Information: full citation, abstract, references, index terms As more sensitive data is shared and stored by third-party sites on the Internet, there will be a need to encrypt data stored at these sites. One drawback of encrypting data, is that it can be selectively shared only at a coarse-grained level (i.e., giving another party your private key). We develop a new cryptosystem for fine-grained sharing of encrypted data that we call Key-Policy Attribute-Based Encryption (KP-ABE). In our cryptosystem, ciphertexts are labeled with sets of attributes and pri ... Keywords: access control, attribute-based encryption, audit logs, broadcast encryption, delegation, hierarchical identity-based encryption 11 Data protection: Searchable symmetric encryption: improved definitions and efficient constructions Reza Curtmola, Juan Garay, Seny Kamara, Rafail Ostrovsky October 2006 Proceedings of the 13th ACM conference on Computer and communications security CCS '06 Publisher: ACM Press Full text available: pdf(682.40 KB) Additional Information: full citation, abstract, references, index terms Searchable symmetric encryption (SSE) allows a party to outsource the storage of its data to another party (a server) in a private manner, while maintaining the ability to selectively search over it. This problem has been the focus of active research in recent years. In this paper we show two solutions to SSE that simultaneously enjoy the following properties: 1. Both solutions are more efficient than all previous constant-round schemes. In particular, the work performed by the server per r ... Keywords: multi-user, searchable encryption, searchable symmetric encryption, security definitions 12 Breaking and provably repairing the SSH authenticated encryption scheme: A case study of the Encode-then-Encrypt-and-MAC paradigm Mihir Bellare, Tadayoshi Kohno, Chanathip Namprempre May 2004 ACM Transactions on Information and System Security (TISSEC), Volume 7 Issue 2 **Publisher: ACM Press** Additional Information: full citation, abstract, references, index terms, Full text available: pdf(404.99 KB) review

The secure shell (SSH) protocol is one of the most popular cryptographic protocols on the Internet. Unfortunately, the current SSH authenticated encryption mechanism is insecure. In this paper, we propose several fixes to the SSH protocol and, using techniques from modern cryptography, we prove that our modified versions of SSH meet strong new chosen-ciphertext privacy and integrity requirements. Furthermore, our proposed fixes

will require relatively little modification to the SSH protoc ... We make use of a trusted third party (TTP) but in an optimistic sense, that is, the TTP takes part in the protocol only if one user cheats or simply crashes. Our schemes can be used as primitives to build efficient fair exchange and certified e-mail protocols. Keywords: Certified e-mail, contract signing, digital signatures, fair exchange, proof of knowledge, public-key cryptography 14 Image processing: The encryption method to share a secret binary image and its decryption system Sang-su Lee, Jong-wook Han, Hyo-wook Bae September 2003 Proceedings of the 1st international symposium on Information and communication technologies ISICT '03 Publisher: Trinity College Dublin Full text available: pdf(156.34 KB) Additional Information: full citation, abstract, references In this paper, an encryption method to share a secret binary image was proposed. This divides the image to be encrypted into an arbitrary number of images and encrypts them using XOR process with different binary random images which was prepared by the means of the XOR process, too. Each encrypted slice image can be distributed to the authenticated ones. However, we transfer the encrypted images to the binary phase masks to strengthen the security power, that means phase masks can not be copied ... **Keywords**: cryptography, data security, image reconstruction, optical imaging 15 Efficient Memory Integrity Verification and Encryption for Secure Processors G. Edward Suh, Dwaine Clarke, Blaise Gassend, Marten van Dijk, Srinivas Devadas December 2003 Proceedings of the 36th annual IEEE/ACM International Symposium on Microarchitecture MICRO 36 Publisher: IEEE Computer Society Full text available: pdf(307.01 KB) Additional Information: full citation, abstract, citings, index terms Secure processors enable new sets of applications suchas commercial grid computing, software copy-protection, and secure mobile agents by providing security from bothphysical and software attacks. This paper proposes newhardware mechanisms for memory integrity verification and encryption, which are two key primitives required in single-chipsecure processors. The integrity verification mechanismoffers significant performance advantages over existingones when the checks are infrequent as in grid com ... <sup>16</sup> Embedded applications: Encryption overhead in embedded systems and sensor network nodes: modeling and analysis Ramnath Venugopalan, Prasanth Ganesan, Pushkin Peddabachagari, Alexander Dean, Frank

Recent research in sensor networks has raised issues of security for small embedded devices. Security concerns are motivated by the deployment of a large number of sensory devices in the field. Limitations in processing power, battery life, communication bandwidth and memory constrain the applicability of existing cryptography standards for small embedded devices. A mismatch between wide arithmetic for security (32 bit word operations) and embedded data bus widths (often only 8 or 16 bits) combi ...

	Broadcast Encryption allows a broadcaster to broadcast an encrypted message so that only a dynamically changing designated group of users can decrypt it. The stateless setting considers the case where the private key at each user is never updated. A central open problem in this area is to design a stateless scheme where both the size of transmission header which encapsulates the session key and the size of private key at each user are small and <i>independent</i> of the number of users (all/priv

19	OCB: A block-cipher mode of operation for efficient authenticated encryption Phillip Rogaway, Mihir Bellare, John Black						

August 2003 ACM Transactions on Information and System Security (TISSEC), Volume 6

**Publisher: ACM Press** 

Full text available: pdf(568.74 KB) Additional Information: full citation, abstract, references, index terms

We describe a parallelizable block-cipher mode of operation that simultaneously provides privacy and authenticity. OCB encrypts-and-authenticates a nonempty string M ∈ {0, 1}\* using  $\square$ &vertbar;M&vertbar; $n\square + 2$  block-cipher invocations, where n is the block length of the underlying block cipher. Additional overhead is small. OCB refines a scheme, IAPM, suggested by Charanjit Jutla. Desirable properties of OCB include the ability to encrypt a bi ...
